

Natural Stone Sealing Specification.

All tips and guidelines should be taken as general advice and should be used in addition to the relevant Australian standards. These tips and advice are given in good faith. In no way do these replace the service of professional contractors / consultants.

Sealing

It is crucial to understand that no two pieces are the same when sealing natural stone. Some natural stones are more porous than others, some tend to stain easier, and some manage just fine. When sealing natural stone, it's an industry recommendation that you seal everything on initial application. Doing so will allow you to keep your stone looking beautiful, avoid damages and will allow easier maintenance and cleaning.

Sealing stone can be done by yourself or by a hired professional. The advantage of hiring a professional is the convenience of professional application, cleaning, and preparation. If the job is quite small and you're handy with the tools with the right guidance you should seal it yourself. Please consult our sales staff or accredited sealing companies for a specified sealing system.

Range of sealers to use:

We highly recommend sealing all natural stones to protect and retain its natural beauty for years to come. We recommend using high quality sealers such as Environex, Aqua mix or Dry Treat.

Please note: We provide these recommendations as a service only and will not be responsible for any sealer claims.
